

## RM-4-M Benchtop Manual Turntable

**Spraying by hand? This tool is a must for many hand-spray applications. *No power required.***

A Heavy-duty steel frame with a dust resistant design and included tray top, this hand-turned table gives you 360° access to your parts. At about 70 Lbs. with a 36" base and over 300 Lb. capacity, it provides stability and smooth turning with enough resistance to hold position when spraying with Electric Arc or Combustion (powder or wire spray) systems.

### The RM-4-M helps reduce or eliminate common issues like:

- Coating process footprint & trip hazards, you don't have to move around your parts
- Part repositioning, coating stoppage, system idle time
- Risk of dropped parts, surface touch contamination & burns
- Operator arm strain and wire & hose path hazards
- Equipment strain & wear by maintaining a more direct path from your system
- Dust build up by consistently spraying towards your dust intake plenum

### Advantages:

- Better coating quality - Easily maintain the recommended 90° spray angle
- Faster coating times - Reduced system idle time and power/fuel consumption
- Operator comfort & safety

### Stability:

- Set heavier items directly on the included Tray top or beams
- Clamp lighter parts in place using the slots in the tray support beams
- Create your own tooling/cradles and attach them to the beams

**Increase efficiency without crushing your budget.**

*\* Bolt or clamp the RM-4-M down for use with heavier or taller items and consider weight distribution before use.*

*\* Custom models are available*
